CAREER OBJECTIVE

Aspiring Data and AI/ML Professional with hands-on experience in Python, SQL, Machine Learning, Generative AI, RAG, LLMs, and Data Analysis, with hands-on experience in developing AI-powered applications and working with data-driven projects. Interested in building intelligent applications, extracting meaningful insights from data, and applying AI techniques to practical business problems.

TECHNICAL SKILLS

AI Technologies: Machine Learning, Deep Learning, Natural Language Processing, LLMs, Transformers, RAG, Prompt Engineering
Programming: Python, JavaScript
Databases: MySQL, MongoDB, ChromaDB
Full-Stack: React.js, Node.js, Express.js
Cloud: AWS (EC2, S3, IAM, Lambda, RDS, VPC, CloudWatch, Route 53)
Tools: Git, GitHub

PROJECTS

RAG-Based Medical Knowledge Assistant *Python, LangChain-style Pipeline, ChromaDB | GitHub*

- Built a **Retrieval-Augmented Generation (RAG) pipeline** using LangChain and ChromaDB to retrieve relevant medical information from Merck Manuals and generate context-aware responses using Llama-2.
- Implemented **document chunking, semantic embeddings, and vector search** to ground LLM responses in trusted medical knowledge and reduce hallucinations.

AI-Powered Food Delivery Chatbot *LangGraph, Multi-Agent AI, SQLite | GitHub*

- Built an AI-powered food delivery chatbot using LangGraph and a multi-agent architecture to handle food search, recommendations, and ordering workflows.
- Implemented specialized AI agents with deterministic tools and SQLite for reliable data operations, enabling structured handling of search, cart, recommendation, and ordering workflows.

Customer Churn Prediction *Python, Pandas, Scikit-learn, XGBoost | GitHub*

- Developed a **machine learning model to predict banking customer churn** using customer account, demographic, and behavioral data, enabling early identification of customers at risk of leaving.
- Performed **exploratory data analysis and visualization** using Matplotlib and Seaborn to identify churn patterns and key customer factors, supporting data-driven retention strategies.

INTERNSHIPS

MERN Stack Developer Intern — Main Flow Services & Technologies *Jul 2025 – Aug 2025*

- Developed full-stack web applications using MongoDB, Express.js, React.js, and Node.js, implementing responsive user interfaces and RESTful APIs.
- Worked on CRUD operations, API integration, authentication, and database management using Git for version control.

AWS Cloud Intern — Cultus Skilling and Job Tech *Aug 2025 – Nov 2025*

- Gained hands-on experience with AWS EC2, S3, IAM, Lambda, VPC, CloudWatch, and Route 53 through practical cloud training and projects.
- Developed practical knowledge of cloud infrastructure, security, deployment, and monitoring practices.

CERTIFICATIONS

Specialization Course in Generative AI — RVS College of Arts and Science in collaboration with Transform Tech *April 2026 – September 2026*

AWS Certified Cloud Practitioner — Amazon Web Services (AWS) *Nov 2025*

EDUCATION

Bachelor of Engineering, Computer Science Engineering *2022 – 2026*
RVS College of Engineering, Dindigul | CGPA: 8.23
